

Anti-Microbial Wallcovering Protection

All **DeNovo** wallcoverings provide Anti-Microbial Protection and comply with ASTM-G21. Utilizing multiple anti-microbials including Ultra-Fresh, our **DeNovo** wallcoverings exhibited NO GROWTH of microorganisms, bacteria, fungi, algae and micro-animals (such as house dust mites) during the ASTM-G21 testing. Our antimicrobial treatments are an active agent that, when included in the manufacturing process of our composition base film, help to control and inhibit microorganisms from occurring within our wallcoverings for the guaranteed 5-year lifespan of the product.

Advantages

Ultra-Fresh Anti-Microbial Protection helps to control the growth of bacteria, mold, and mildew throughout the life of the wallcovering:

- Provides life of product safeguard from microorganisms, bacteria, fungi, algae and micro-animals (such as house dust mites)
- Keeps our wallcoverings fresh, clean and odor-free
- Preserves the aesthetic attraction and permanence of your investment
- Adds value to your project
- Safe, Effective, Responsible
